

California Jobs First

Project Name: Mobile Wrokforce Training Lab

Project Sponsor: Nevada County Economic Resource Council

Purpose: Create a movable training facility that will train in "Heat-Pump" technology and "Energy Auditing"

Service Area: As needed in all rural portion of the state to provide education in the workforce required for a "Carbon-Neutral" environment

Reasoning While there is an upcoming need for a workforce to accomplish a "Carbon-Neutural" environment. The rural portion of the state find it difficult to send personnel away to training centers in the urban areas

How does this project meet the demands of the California Jobs First mandate?
Focused targeting of students would be done in the rural and underserved areas. Since the technical skills required in the two identified disaplines can be easily taught and do not require pre-requisit training, this will allow the disinvested community to enter a low cost or no cost training in a field with high future demand
